GitHub: https://github.com/sabasyed00 | Portfolio: https://sabasyed00.github.io/Saba_Zehra_Syed/

PROFESSIONAL SUMMARY

Early-career Data Science and Analytics professional with an MSc in Data Science & Analytics and experience across freelance analytics projects, machine learning, academic research, technical internships, and operations management. Skilled in Python, SQL, Snowflake, Power BI, Tableau, exploratory data analysis, data cleaning, and predictive modelling. Experienced in developing dashboards, analysing datasets, preparing detailed business case reports, and applying machine learning techniques to practical problems. Combines technical problem-solving and research experience with stakeholder communication, project coordination, and business understanding.

TECHNICAL SKILLS

Programming: Python, SQL, R

Data Analytics: Data cleaning, exploratory data analysis (EDA), data transformation, trend analysis, statistical analysis, business reporting

Business Intelligence: Power BI, Tableau, Microsoft Excel, dashboard development, data visualization, data storytelling

Machine Learning & AI: Predictive modelling, supervised and unsupervised learning, clustering, deep learning, CNNs, RNNs, LLMs, RAG, embeddings

Databases & Development: Snowflake, stored procedures, SQL tables, sequence objects, REST APIs, Flask, FastAPI, MongoDB

Tools & Platforms: Git, GitHub, Jupyter Notebook, VS Code, Postman

Cloud & Deployment: AWS fundamentals, Docker, CI/CD concepts

Professional Skills: Business case reporting, stakeholder communication, project coordination, team leadership, problem-solving

PROFESSIONAL EXPERIENCE

Freelance Data Analyst & Data Science Consultant

Fiverr | February 2024 – Present

- Undertake a mix of paid client assignments and independent portfolio projects involving data analytics, machine learning, and business intelligence.
- Clean, prepare, and explore datasets using Python to identify data-quality issues, patterns, and trends.
- Conduct exploratory data analysis to investigate datasets and support evidence-based interpretation of business problems.
- Develop Power BI and Tableau dashboards to present key indicators, trends, and findings visually.
- Work on machine learning workflows for analytical and predictive use cases.
- Prepare detailed business case reports outlining business problems, analytical findings, and practical recommendations.
- Use SQL and Snowflake in project work involving structured data querying, transformation, and analysis.
- Maintain selected technical projects and demonstrations through GitHub and portfolio materials.

Manager – Operations (Part -Time)

McDonald's UK | December 2022 – February 2025

- Managed daily restaurant operations in a high-volume customer-facing environment, coordinating team activities to maintain service quality and operational standards.
- Supported staff scheduling, inventory monitoring, cash handling, and compliance with food safety and workplace procedures.
- Coordinated team members during busy shifts and addressed operational issues to support efficient service delivery.
- Participated in operational improvement activities, including exposure to AI-integrated ordering and inventory systems, where applicable to assigned responsibilities.
- Developed leadership, decision-making, problem-solving, and communication skills while balancing customer needs with operational requirements.

Programme Manager (Part -Time)

Belonging Pioneers | February 2024 – May 2024

- Supported the Balancing The Scales 2024 initiative through programme coordination, communications, and engagement activities.
- Contributed to content planning and digital campaign activities aligned with programme objectives.
- Worked with engagement information and programme-related data to identify trends and support reporting.
- Coordinated activities and communications across stakeholders and collaborating organizations.

Java Intern

Wipro | March 2022 – May 2022

- Gained practical exposure to Java programming and software development workflows.
- Worked on programming tasks to strengthen understanding of application logic, debugging, and code structure.

Data Science Intern
Innomatics Research Labs | October 2021 – January 2022

- Worked on a plant disease detection project using convolutional neural networks (CNNs) and deep learning techniques.
- Contributed to model development and evaluation for image-based disease classification.
- Performed exploratory and geospatial analysis of infant mortality data to examine patterns across locations.
- Used choropleth maps and heatmaps to communicate spatial trends.
- Worked on a machine learning API to support model access and application integration.

Java & GIS Technology Intern
Infokites Pvt Ltd | March 2020 – June 2021

- Gained experience in Java development and GIS-related application work.
- Contributed to web application tasks involving the MERN stack and location-based visualization.
- Supported technical troubleshooting and application-related activities.
- Developed familiarity with version control, deployment workflows, and CI/CD practices.

SELECTED PROJECTS

Snowflake SQL Billing & Inventory Management System
Personal Technical Project

- Designed ITEM_MASTER to maintain item codes, available quantities, and item rates, and CASH_MASTER to record billing transactions.
- Developed a parameterized Snowflake SQL stored procedure to process item purchases and execute billing logic.
- Implemented validation checks for item codes, requested quantities, and stock availability.
- Calculated bill amounts using item rates and requested quantities.
- Implemented inventory updates following successful purchase processing.
- Recorded billing details, transaction dates, and calculated amounts.
- Used a Snowflake sequence to generate bill numbers automatically.

Nexus-Mind: Retrieval-Augmented and Instruction-Tuned Language Models in AI-Driven Healthcare
MSc Research Project | University of Hertfordshire

- Researched retrieval-augmented generation and instruction-tuned language models in the context of AI-driven healthcare.
- Examined approaches for connecting language models with relevant information to support context-aware responses.
- Conducted a comparative analysis of model approaches as part of the research thesis.

Infant Mortality: Exploratory and Geospatial Data Analysis
Data Science Project | Innomatics Research Labs

- Analysed infant mortality data to explore trends and geographic differences.
- Used exploratory analysis and spatial visualizations to examine location-based patterns.
- Created choropleth maps and heatmaps to communicate findings.

Combustion Detection Using Convolutional Neural Networks
Undergraduate Project | B.Tech Information Technology

- Worked on a CNN-based approach to combustion detection.
- Applied machine learning concepts to a classification problem as part of undergraduate project work.

EDUCATION

MSc Data Science & Analytics with Advanced Research
University of Hertfordshire, United Kingdom | Completed October 2024
Research thesis: Nexus-Mind: A Comparative Analysis of Retrieval-Augmented & Instruction-Tuned Language Models in AI-Driven Healthcare.

Bachelor of Technology (B.Tech), Information Technology
Aalim Muhammed Salegh College of Engineering, Chennai | July 2022
Undergraduate project: Building Convolutional Neural Network for Combustion Detection.
